

2532 <====> 2732 EPROM Socket Converter, Copr. (C) 04 May 2010, GCC-ECS-0001.0  
 By: John Eric Turner & His Father, <http://www.GIMEchip.com/>  
 JP1 Connects the 2732's OE to the CE (the 2532 lacks the OE signal)  
 JP2 Connects the 2732's OE to GND.

Both jumpers should never be on at the same time. In most cases, only JP2 should be fitted.  
 If you fit I.C. pins for IC1 (2532) and a socket for IC2, then you may plug a 2732 into a 2532 socket.  
 If you fit I.C. pins for IC2 (2732) and a socket for IC1, then you may plug a 2532 into a 2732 socket.
